

# Activity

Maria Barouti

- **Exercise 1:** Gather the `monkeymem` data frame . The cell values represent identification accuracy of some objects (in percent of 20 trials).
- **Exercise 2:** Spread the `flowers1` data frame.
- **Exercise 3:** Separate the `flowers2` data frame.
- **Exercise 4:** Re-unite the data frame you separated from the `flowers2` exercise. Use a comma for the separator.
